

YANMAR SV100-2PB

£POA

Designed to work effectively on a wide variety of sites, the SV100-2PB combines power, versatility, manoeuvrability, comfort and reliability with surprising compactness. It also offers easy maintenance. A two-piece articulated boom, normally only seen on heavy excavators, greatly facilitates lifting, moving and placing loads, with lifting capacity increased by 45% in some instances. A single top-mounted articulation cylinder offers total protection and divides dead weight by half, as well as greatly reducing total cost of ownership.
