

YANMAR SV120

£POA

For one of the larger models in our range of midi excavators, the compactness and short tail of the SV120 mean its still suitable for small sites. A smart control system includes fingertip operation, while a dozer blade with rounded profile improves material removal. Four independent hydraulic circuits mean it can use a wide range of attachments. The powerful, low-consumption and eco-friendly engine meets the latest EU and EPA regulations, and offers two-speed travel drive with automatic and rapid shifting.
